

VENUS is the younger sister.
She is the 2nd planet away from
Great-Grandmother Sun.

Venus is the **HOTTEST** planet
in the family. She is covered
with yellow and orange swirls
and sparkles in space like a
glowing topaz jewel.

Venus is very fond of her older
sister. She wants to be more
like Earth and hopes to have a
moon of her own someday, just
like Earth.

VENUS
